

Scientist

Responsibilities:

- Lead 1-2 projects, including the supervision of a technician
- Perform cloning, expression, purification and routine analysis of proteins
- Characterize purified enzymes for functionality and purity
- Develop standard operating procedures for industrial scale protein production
- Contribute to the identification and implementation of new techniques and technologies

Requirements:

- Ph.D. in biochemistry with a strong emphasis in enzyme production and characterization
- Experience in leading projects, project planning and reporting
- Minimum 2 years industrial experience in the areas of protein expression, purification, quantification and analysis
- Hands-on experience in automation and in multi-parallel cloning and expression of proteins
- Expertise in the biophysical and enzymatic characterization of proteins, particularly with activity assays
- Experience in up-scaling of expression and downstream processing of proteins
- Ability to plan and multi-task effectively
- Excellent communication and organization skills
- Ability to work within a team environment

Are you interested in working in an open-minded, highly motivated team?
If so, please submit your application online or to Dr. Henryk Kalisz,
